

✓ For use in existing and under construction buildings

✓ Ideal protection of shopping facilities

✓ Security and comfort

BKR

## COMMERCIAL GATE SYSTEMS

■ The basic functions of the grille are protection of buildings with the advantage to better present the display windows and assurance of proper ventilation in shopping malls and underground garages.

■ It can be assembled not only during construction of a new building, but also in existing buildings. The grille can be controlled with a switch or with easy to use control mechanisms.

■ According to the binding norms the commercial gate is equipped with protection against fall down as a standard. It might be equipped additionally with protection against being crushed during closing and against raising. Furthermore, the roller grill can also have a set of photocells.
